4. Discussion

5. Conclusion

After proofreading the manuscript, compress your .TEX manuscript file and all figures (which should be in EPS format, or PDF format if you are using PDF-LATEX) in a ZIP, TAR or TAR-GZIP package. Prism, OSA's article tracking system, will process in LATEXmode by default but will use PDF-LATEXif PDF figure files are detected. Note: TAR or TAR-GZIP is no longer required. All files must be referenced at the root level (e.g., file `figure-1.eps`, not `/myfigs/figure-1.eps`). If there is video or other multimedia, the associated files should be uploaded separately.
